SOUTHERN MIDLANDS COUNCIL

APPLICATION FOR PLANNING PERMIT – USE AND DEVELOPMENT

Residential Use

Use this form to apply for planning approval in accordance with section 57 and 58 of the *Land Use Planning and Approvals Act 1993*

Applicant / Owner Details:

Owner / s Name	Centacare Evolve Housing Limited		
Postal Address	35 Tower Road, New Town	Phone No:	
	7008	Fax No:	
Email address:	centacareevolve@aohtas.org.au		
Applicant Name (if not owner)	Prime Design Tasmania		
Postal Address:	10 Goodman Court	Phone No:	6332 3790
	Invermay TAS 7248	Fax No:	
Email address:	planning@primedesigntas.com.au		

Description of proposed use and/or development:

Address of new use and development:	Lot 2, Louisa Street, Kempton	
Certificate of Title No:	Volume No 36471	Lot No: 2
Description of proposed use or development:	Proposed new multi-residential development.	ie: New Dwelling /Additions/ Demolition / /Shed / Farm Building / Carport / Swimming Pool or detail other etc.
Current use of land and buildings:	Vacant block.	Eg. Are there any existing buildings on this title? If yes, what is the main building used as?

Is the property Heritage Listed — Please tick ✓answer: Yes ✓ / No

Proposed Material

What are the proposed external wall materials	Refer to drawings & design response	What is the proposed roof material	Refer to drawings & design response
What are the proposed external wall colours		What is the proposed roof colour	
What is the proposed new floor area m².	1414.7 m2	What is the estimated value of all the new work proposed:	$ 3.5 million

Please attach any additional information that may be required by Part 6.1 Application Requirements of the Tasmanian Planning Scheme.

Signed Declaration

I/we hereby apply for a planning approval to carry out the use or development described in this application and in the accompanying plans and documents, accordingly I declare that:

1. The information given is a true and accurate representation of the proposed development. I understand that the information and materials provided with this development application may be made available to the public. I understand that the Council may make such copies of the information and materials as, in its opinion, are necessary to facilitate a thorough consideration of the Development Application. I have obtained the relevant permission of the copyright owner for the communication and reproduction of the plans accompanying the development application, for the purposes of assessment of that application. I indemnify the Southern Midlands Council for any claim or action taken against it in respect of breach of copyright in respect of any of the information or material provided.
2. I am the applicant for the planning permit and I have notified the owner/s of the land in writing of the intention to make this application in accordance with Section 52(1) of the *Land Use Planning Approvals Act 1993* (or the land owner has signed this form in the box below in "Land Owner(s) signature);

Dear Planner,

Re: Proposed Multi-Residential Development for Lot 2, Louisa Street, Kempton

12.0 Village Zone
Code Overlays: Local Heritage Place

The proposal comprises a total of 16 homes, the combination of a set of 3 co-joined units and 13 individual residences. These residences are designed with the heritage characteristics of Kempton in mind, and provide a mix development of two-bedroom and single-bedroom offerings, with the option of carports or garages for 7 of these residences. The external façades – cladding and colour selections – will also be muted mid-colour tones in keeping with its surrounding streetscape.

The intent of the proposal is to provide quality and affordable community homes within the Southern Midlands region, as well as alternative forms of housing befitting to smaller households. Based on the 2021 Census by the Australian Bureau of Statistics, the published average number of people per household is 2.6 within the Kempton suburb, making these units ideal.

12.4.1 Residential Density and Servicing for Multiple Dwellings

A1 (a) Does not comply. Site area per dwelling is 315m^2
(b) Does not comply, site is not currently connected to reticulated sewer and stormwater networks and water supply.

P1.1 The proposed development is capable of being connected to reticulated sewerage, stormwater and full water supply as per the included designs by Gandy & Roberts. Discussions conducted by Gandy & Roberts indicate that the existing network is capable of managing the requirements of the development. The proposal is also in keeping with the density of development in the surrounding area with close by multi residential developments at 2 Elizabeth Street, 6 Elizabeth Street & 26 Louisa Street. The development is a social housing project with the intent to support the community and government efforts to provide appropriate and affordable housing.

12.4.2 Building Height

A1 Complies. All building heights do not exceed 8.5m

ABN 63 111 803 948 | 10 Goodman Court Invermay, Launceston | Shop 9, 105-111 Main Road Moonah, TAS | p+(l) 03 6332 3790 | p+(l) 03 6228 4575 | info@primedesigntas.com.au | primedesigntas.com.au

12.4.3 Setback

A1 Complies with (a). The proposed buildings are set back at least 5.7m from the frontage.

A2 Complies with (a). Setback for all units are more than 3m along side and rear boundaries.

A3 Not applicable.

12.4.4 Site Coverage

A1 Complies. Site coverage is 23.3%.

12.4.5 Fencing

P1 Not applicable. No frontage fences proposed within 4.5m of frontage.

C6.0 Local Historic Heritage Code

The subject site is a local heritage place with the St Peter's Catholic Cemetery on Lot 3 being registered on the Tasmania Heritage Register. St Peter's Catholic Cemetery is a grassed rectangular block of land, forming part of the larger parcel of Lot 3. The Catholic church in Tasmania started using the platform Chronicle to document burial sites/cemeteries. The below excerpt from Chronice shows the extent of vacant and occupied burial sites in the St Peter's Catholic Cemetery.

The proposed development for social housing by the Roman Catholic Church Trust Corporation of the Archdiocese Hobart maintains the Catholic Church's presence on the site which was established in the 1860s.

C6.1 Purpose

To ensure that new use and development is undertaken in a manner that is sympathetic to, and does not detract from, the cultural significance of the land, buildings and items and their settings.

C6.6.1 Demolition

Not applicable – no demolition proposed in this application.

C6.6.2 Site Coverage

P1 St Peter's Catholic Cemetery has meaning to the Kempton community as a place of commemoration and memory. The pattern of development surrounding the site is the most densely developed area within Kempton and is characterised by a mixture of single dwellings on large lots, single dwellings on standard lots and more recent multi-residential developments. The property directly neighbouring the cemetery has buildings built to the shared boundary with some vegetation on the cemetery site providing separation. The proposed development is set back off Louisa Street and behind the cemetery and retains a minimum setback of 3m from the cemetery boundary. Therefore the proposed pattern and density of site coverage is considered to be in keeping with the surrounding development and respectful to the significance of the place.

C6.6.3 Height and Bulk of Buildings

P1 The proposed development continues the pattern of height and bulk of buildings within Kempton and surrounding the site. The height and bulk of the buildings will not detract from the heritage values of the site and retain the character of the place.

C6.6.4 Siting of Buildings and Structures

P1 The proposed development sits 60m away from its access point on Louisa Street and is setback more than 3m along all boundaries including the boundary to the cemetery. This is very much in keeping with the setbacks of the neighbouring dwellings and does not encroach within the established boundaries of the cemetery. This retains and does not detract from the significance of the cemetery site.

C6.6.5 Fences

P1 The existing fences on the site consist of a low timber post and rail fence fronting Louisa Street, Colorbond fences along the northern boundary shared with 23 Louisa Street and wire fencing around the cemetery site and other boundaries. The surrounding properties feature a variety of fencing types including timber paling, timber picket and wrought iron. The proposed fencing for the development will be timber paling which is in keeping with the surrounding fences and provides clear delineation between the development and the cemetery. The setback of the proposed fences and a development from Louisa Street and located behind the cemetery provides that the development is subservient in prominence than the cemetery and retains when viewed from Louisa Street.

C6.6.6 Roof Form and Materials

P1 The units will be finished with standard brick veneer and lightweight weatherboard cladding and roofed with Colorbond Custom Orb. The roof forms comprise standard hip and gable styles, with smaller eaves to match the designs of local heritage structures, in an effort to not detract from surrounding historical significant construction and be sympathetic to the surrounding landscape. The design of the proposed new units is in keeping with the Design Guidelines for Georgian Buildings in the Main Streets of Kempton and Oatlands and will retain the dominant roofing style and materials within the setting and streetscape and retail the historic heritage significance of the place.

Fig 1 Residential properties on Louisa Street clad in brick veneer and lightweight cladding accents

Fig 2 Residential properties on Louisa Street with applications of hip and valley Colourbond roofs

As shown in the images above, the proposed development is also compatible with the roof forms and materiality with its streetscape.

C6.6.7 Building Alterations, excluding roof form and Materials

Not applicable – no existing building.

C6.6.8 Outbuildings and Structures

P1 The proposed development will include small outbuildings for storage of gardening equipment. These small garden sheds will be located in the yards of the proposed units and shielded from view from any road or public space by fences.

C6.6.9 Driveways and parking for Non-residential Purposes

Not applicable.

C6.6.10 Removal, destruction or lopping of trees, or removal of vegetation, that is specifically part of a Local Heritage Place

Not applicable – no removal of trees.

Kind regards,
Tarcia Wong

Figure Index

1. Introduction

1.1 Background

Midson Traffic were engaged by Prime Design to prepare a traffic impact assessment for a proposed residential unit development at Lot 2, Louisa Street, Kempton.

1.2 Traffic Impact Assessment (TIA)

A traffic impact assessment (TIA) is a process of compiling and analysing information on the impacts that a specific development proposal is likely to have on the operation of roads and transport networks. A TIA should not only include general impacts relating to traffic management, but should also consider specific impacts on all road users, including on-road public transport, pedestrians, cyclists and heavy vehicles.

This TIA has been prepared in accordance with the Department of State Growth (DSG) publication, *Traffic Impact Assessment Guidelines*, August 2020. This TIA has also been prepared with reference to the Austroads publication, *Guide to Traffic Management,* Part 12: *Traffic Impacts of Developments*, 2019.

Land use developments generate traffic movements as people move to, from and within a development. Without a clear understanding of the type of traffic movements (including cars, pedestrians, trucks, etc), the scale of their movements, timing, duration and location, there is a risk that this traffic movement may contribute to safety issues, unforeseen congestion or other problems where the development connects to the road system or elsewhere on the road network. A TIA attempts to forecast these movements and their impact on the surrounding transport network.

A TIA is not a promotional exercise undertaken on behalf of a developer; a TIA must provide an impartial and objective description of the impacts and traffic effects of a proposed development. A full and detailed assessment of how vehicle and person movements to and from a development site might affect existing road and pedestrian networks is required. An objective consideration of the traffic impact of a proposal is vital to enable planning decisions to be based upon the principles of sustainable development.

This TIA also addresses the relevant clauses of C2.0, *Parking and Sustainable Parking Code*, and C3.0, *Road and Railway Assets Code*, of the Tasmanian Planning Scheme – Southern Midlands, 2022.

1.3 Statement of Qualification and Experience

This TIA has been prepared by an experienced and qualified traffic engineer in accordance with the requirements of Council's Planning Scheme and The Department of State Growth's, *Traffic Impact Assessment Guidelines*, August 2020, as well as Council's requirements.

The TIA was prepared by Keith Midson. Keith's experience and qualifications are briefly outlined as follows:

- 28 years professional experience in traffic engineering and transport planning.
- Master of Transport, Monash University, 2006
- Master of Traffic, Monash University, 2004

- Bachelor of Civil Engineering, University of Tasmania, 1995
- Engineers Australia: Fellow (FIEAust); Chartered Professional Engineer (CPEng); Engineering Executive (EngExec); National Engineers Register (NER)

1.4 Project Scope

The project scope of this TIA is outlined as follows:

- Review of the existing road environment in the vicinity of the site and the traffic conditions on the road network.
- Provision of information on the proposed development with regards to traffic movements and activity.
- Identification of the traffic generation potential of the proposal with respect to the surrounding road network in terms of road network capacity.
- Review of the parking requirements of the proposed development. Assessment of this parking supply with Planning Scheme requirements.
- Traffic implications of the proposal with respect to the external road network in terms of traffic efficiency and road safety.

1.5 Subject Site

The subject site is located at Lot 2, Louisa Street, Kempton. The site is currently a vacant lot located at the rear of a cemetery.

The subject site and surrounding road network is shown in Figure 1.

Figure 1 Subject Site & Surrounding Road Network

Image Source: LIST Map, DPIPWE

1.6 Reference Resources

The following references were used in the preparation of this TIA:

- Tasmanian Planning Scheme – Southern Midlands, 2022 (Planning Scheme)
- Austroads, *Guide to Traffic Management,* Part 12: *Traffic Impacts of Developments*, 2019
- Austroads, Guide to Road Design, Part 4A: Unsignalised and Signalised Intersections, 2021
- Department of State Growth, *Traffic Impact Assessment Guidelines*, 2020
- Roads and Maritime Services NSW, *Guide to Traffic Generating Developments*, 2002 (RMS Guide)
- Roads and Maritime Services NSW, *Updated Traffic Surveys,* 2013 (Updated RMS Guide)
- Australian Standards, AS2890.1, *Off-Street Parking*, 2004 (AS2890.1)

2. Existing Conditions

2.1 Transport Network

For the purposes of this report, the transport network consists of Louisa Street and Elizabeth Street.

Louisa Street connects between Burnett Street and Old Hunting Ground Road. It runs parallel to Main Street and provides connectivity to a small residential catchment area. The general urban speed limit of 50-km/h is applicable to Louisa Street. It carries a traffic volume estimated to be less than 1,000 vehicles per day. Louisa Street has a sealed pavement width of approximately 7 metres.

Elizabeth Street connects between Main Street and Louisa Street. Elizabeth Street connects to Louisa Street at a T-junction with Louisa Street having priority. Elizabeth Street has an unsealed informal pavement to the southwest of the Louisa Street junction (adjacent to the subject site).

2.2 Road Safety Performance

Crash data can provide valuable information on the road safety performance of a road network. Existing road safety deficiencies can be highlighted through the examination of crash data, which can assist in determining whether traffic generation from the proposed development may exacerbate any identified issues.

Crash data was obtained from the Department of State Growth for a 5+ year period between 1st January 2018 and 30th November 2023 for the full length of Louisa Street.

One crash was reported during this time. The crash occurred at 11:15am on Monday 28th June 2021 at the intersection of Louisa Street and Erskine Street. The crash involved a 'cross-traffic' collision between two vehicles resulting in property damage only.

The crash data does not indicate that there are any existing road safety deficiencies in the network near the subject site.

3. Proposed Development

3.1 Development Proposal

The proposed development involves the construction of 16 residential units comprising of 5 x 1-bedroom and 11 x 2-bedroom units. A new main driveway access will connect the internal site to Louisa Street.

A total of 31 on-site car parking spaces are proposed. This comprises of 24 spaces in a jockey-style configuration for 11 units, and 7 angle parking spaces located within the main circulation access of the site.

The proposed development is shown in Figure 2.

Figure 2 Proposed Development Plans

4. Traffic Impacts

4.1 Trip Generation

Trip generation was sourced from the RMS Guide. The RMS Guide recommends the following traffic generation rates for the development:

- Residential units 6 trips/ dwelling per day peak 0.6 trips/ dwelling per hour

This equates to a total traffic generation of 96 vehicles per day with a peak of 10 vehicles per hour.

4.2 Trip Assignment

Based on the connectivity of the site to the external road network, the dominant movements at the site's access are likely to be left-in/ right-out.

4.3 Access Impacts

The Acceptable Solution A1.2 of Clause C3.5.1 of the Planning Scheme states "*For a road, excluding a category 1 road or a limited access road, written consent for a new junction, vehicle crossing, or level crossing to serve the use and development has been issued by the road authority*".

In this case written consent has not been provided. The Performance Criteria P1 of Clause C3.5.1 of the Planning Scheme states:

> *"Vehicular traffic to and from the site must minimise any adverse effects on the safety of a junction, vehicle crossing or level crossing or safety or efficiency of the road or rail network, having regard to:*
>
> *(a) any increase in traffic caused by the use;*
>
> *(b) the nature of the traffic generated by the use;*
>
> *(c) the nature of the road;*
>
> *(d) the speed limit and traffic flow of the road;*
>
> *(e) any alternative access to a road;*
>
> *(f) the need for the use;*
>
> *(g) any traffic impact assessment; and*
>
> *(h) any advice received from the rail or road authority".*

The following is relevant with respect to the development proposal:

a. Increase in traffic. The traffic generation of the development is likely to be 96 vehicles per day. The traffic generation is considered to be relatively low with a peak hour traffic generation of 10 vehicles per hour which can be absorbed in at the site's access at a high level of efficiency noting that it represents an average of 1 vehicle every 6 minutes on average during peak periods.

b. Nature of traffic. The traffic will be residential in nature, consistent with traffic currently utilising the surrounding network.

c. Nature of road. Lousia Street is a low volume residential street that services a local residential catchment area. The nature of the road is consistent with the type of traffic that will be generated by the development proposal.

d. Speed limit and traffic flow. Louisa Street carries approximately less than 1,000 vehicles per day. The general urban speed limit of 50-km/h is applicable to Louisa Street. The volume and speed limit of Louisa Street is compatible with the traffic generation of the proposed development.

e. Alternative access. No alternative access is possible or considered necessary.

f. Need for use. The access is required to service the car parking and loading areas associated with the proposed development.

g. Traffic impact assessment. This report documents the findings of a traffic impact assessment.

h. Road authority advice. Council requires a TIA to be prepared for the proposed development.

Based on the above assessment, the access arrangements associated with the proposed development satisfy the requirements of Performance Criteria P1 of Clause C3.5.1 of the Planning Scheme.

4.4 Sight Distance

Australian Standards, AS2890.1, provide the sight distance requirements for residential and domestic driveways. Sight distance requirements are lower for driveways compared to road junctions.

AS2890.1 requires a minimum sight distance of 40 metres for a domestic property. Sight distance is unrestricted at the driveway access, noting that Louisa Street has a straight horizontal and vertical alignment near the subject site thus providing uninterrupted sight distance. The sight distance requirements of AS2890.1 are therefore met.

4.5 Pedestrian Impacts

The development provides 1.0-metre pedestrian footpaths along the northern side of the main access driveway into the site connecting to Louisa Street. A 1.0-metre footpath is also provided along one side of the each of the internal circulation accesses within the site. These paths connect to the units within the development.

The Acceptable Solution A1 of Clause C2.6.5 of the Planning Scheme states:

"Uses that require 10 or more car parking spaces must:

(a) have a 1m wide footpath that is separated from the access ways or parking aisles, excluding where crossing access ways or parking aisles, by:

(i) a horizontal distance of 2.5m between the edge of the footpath and the access way or parking aisle; or

(ii) protective devices such as bollards, guard rails or planters between the footpath and the access way or parking aisle; and

(b) be signed and line marked at points where pedestrians cross access ways or parking aisles".

In this case pedestrian footpaths are provided but it is not located 2.5 metres from the access way and is not protected by bollards or other protective devices. On this basis the Acceptable Solution A1 of Clause C2.6.5 of the Planning Scheme is not met.

The Performance Criteria P1 of Clause C2.6.5 of the Planning Scheme states:

"Safe and convenient pedestrian access must be provided within parking areas, having regard to:

(a) the characteristics of the site;

(b) the nature of the use;

(c) the number of parking spaces;

(d) the frequency of vehicle movements;

(e) the needs of persons with a disability;

(f) the location and number of footpath crossings;

(g) vehicle and pedestrian traffic safety;

(h) the location of any access ways or parking aisles; and

(i) any protective devices proposed for pedestrian safety".

The following is relevant with respect to the development:

a. Characteristics of site. The site is a residential unit development. Pedestrian paths are provided within the site and the traffic generation associated with the development is very low. Vehicle speeds will be very low by virtue of the short and narrow access that services the development.

b. Nature of the use. The use is residential, which is consistent with land use in the surrounding area.

c. Number of parking spaces. A total of 31 on-site parking spaces are proposed, accessed via a single driveway access.

d. Frequency of vehicle movements. The peak traffic generation will be 10 vehicles per hour (equating to an average of 1 vehicle movement every 6 minutes on average, less outside of peak periods). The low traffic generation coupled with the low vehicle speeds will result in an acceptable safety environment for shared use between pedestrians and vehicles.

e. Needs of persons with a disability. Not applicable.

f. Location and number of footpath crossings. Not applicable.

g. Vehicle and pedestrian safety. A 1-metre footpath is provided adjacent to the parking area, internal circulation aisle and driveway access. As noted in d above, the low traffic generation coupled with the low vehicle speeds will result in an acceptable safety environment for shared use between pedestrians and cars.

h. Location of access ways or parking aisles. The development has a relatively simple layout with a main driveway access and a central manoeuvring area within the main section of the car park. Parking is accessed at 90-degrees within the main area, predominantly as internal driveways associated with each unit, as well as a small section of angle parking within the site.

i. Protective devices. No pedestrian protective devices are included in the design. The low-speed and low volume environment associated with the site does not warrant the use of protective devices.

Based on the above assessment, the development meets the requirements of Performance Criteria P1 of Clause C2.6.5 of the Planning Scheme.

4.6 Road Safety Impacts

No significant road safety impacts are foreseen for the proposed development. This is based on the following:

- The surrounding road transport network is capable of absorbing the relatively small estimated traffic generation of the proposed development. Noting specifically that the peak generation is 10 vehicles per hour, which represents slightly greater than 1 vehicle every 6 minutes on average.
- The access is located in a straight section of roadway with good sight distance provision.
- The access is in a low-speed and low-volume environment.
- The crash history of the surrounding road network near the subject site does not indicate that there are any specific road safety issues that are likely to be exacerbated by the proposed development.

5. Parking Assessment

5.1 Parking Provision

The proposed development provides a total of 31 on-site car parking spaces. This consists of the following:

- 22 spaces in a jockey style arrangement. This includes 2 x garage spaces and 5 carport spaces.
- 2 single spaces within a driveway.
- 7 angle parking spaces located along the central access driveway within the site.

5.2 Empirical Parking Assessment

The RMS Guide defines medium density as "*A medium density residential flat building is a building containing at least 2 but less than 20 dwellings. This includes villas, town houses, flats, semi-detached houses, terrace or row houses and other medium density developments*".

The RMS Guide recommends the following parking provision for medium density housing:

- 1 space per unit
- + 1 space for every 5 x 2-bedroom unit
- + 1 space for every 2 x 3-bedroom unit
- + 1 space for 5 units visitor parking

This equates to a likely paring demand for 22 spaces. The provision of 31 spaces satisfies this likely demand.

5.3 Planning Scheme Requirements

The Acceptable Solution A1 of Clause C2.5.1 of the Planning Scheme states:

> *"The number of on-site car parking spaces must be no less than the number specified in Table C2.1, excluding if:*
>
> *(a) the site is subject to a parking plan for the area adopted by council, in which case parking provision (spaces or cash-in-lieu) must be in accordance with that plan;*
>
> *(b) the site is contained within a parking precinct plan and subject to Clause C2.7;*
>
> *(c) the site is subject to Clause C2.5.5; or*
>
> *(d) it relates to an intensification of an existing use or development or a change of use where:*
>
> *(i) the number of on-site car parking spaces for the existing use or development specified in Table C2.1 is greater than the number of car parking spaces specified in Table*

C2.1 for the proposed use or development, in which case no additional on-site car parking is required; or

(ii) the number of on-site car parking spaces for the existing use or development specified in Table C2.1 is less than the number of car parking spaces specified in Table C2.1 for the proposed use or development, in which case on-site car parking must be calculated as follows:

N = A + (C- B)

N = Number of on-site car parking spaces required

A = Number of existing on site car parking spaces

B = Number of on-site car parking spaces required for the existing use or development specified in Table C2.1

C= Number of on-site car parking spaces required for the proposed use or development specified in Table C2.1".

In this case, sub-points (a), (b), (c), and (d) are not applicable.

The parking requirements of Table C2.1 are set out as follows:

Residential

- 1 bedroom unit — 1 parking space
- 2 bedroom unit — 2 parking spaces
- Visitor parking — 1 space per 3 units (internal lot) = 0.7 spaces

This equates to a parking requirement of 32 spaces. The provision of 31 spaces is a shortfall of 1 parking space. The shortfall relates to 1 visitor parking space (ie. all resident parking requirements are satisfied). The Acceptable Solution A1 of Clause C2.5.1 of the Planning Scheme is therefore not met.

The Performance Criteria P1 of Clause C2.5.1 of the Planning Scheme states:

"The number of car parking spaces for dwellings must meet the reasonable needs of the use, having regard to:

(a) the nature and intensity of the use and car parking required;

(b) the size of the dwelling and the number of bedrooms; and

(c) the pattern of parking in the surrounding area".

The following is relevant with respect to the proposed development:

a. Nature and intensity of use and car parking required. The development is a medium density residential development. The likely parking demands are outlined in Section 5.2. The likely parking demands are lower than Table C2.1 requirements due to the nature of the development being medium density residential.

b. Dwelling sizes and number of bedrooms. The development comprises of 5 x 1-bedroom units and 11 x 2-bedroom units. Floor areas of the units are relatively small, vary between approximately 63m^2 to 95m^2.

c. Pattern of parking. Whilst the proposed development is located on an internal block, there is a large pool of available parking in Louisa Street. Site observations indicate that on-street parking demands are relatively low. On-street parking can therefore cater for any overflow visitor parking demands that may occur for the development. A pedestrian footpath has been proposed along the driveway access, which is approximately 60 metres in length (between Louisa Street and the subject site).

Based on the above assessment, the development satisfies the requirements of Performance Criteria P1 of Clause C2.5.1 of the Planning Scheme.

5.4 Car Parking Layout

The Acceptable Solution A1.1 of Clause C2.6.2 of the Planning Scheme states:

"Parking, access ways, manoeuvring and circulation spaces must either:

(a) comply with the following:

(i) have a gradient in accordance with Australian Standard AS 2890 - Parking facilities, Parts 1-6;

(ii) provide for vehicles to enter and exit the site in a forward direction where providing for more than 4 parking spaces;

(iii) have an access width not less than the requirements in Table C2.2;

(iv) have car parking space dimensions which satisfy the requirements in Table C2.3;

(v) have a combined access and manoeuvring width adjacent to parking spaces not less than the requirements in Table C2.3 where there are 3 or more car parking spaces;

(vi) have a vertical clearance of not less than 2.1m above the parking surface level; and

(vii) excluding a single dwelling, be delineated by line marking or other clear physical means; or

(b) comply with Australian Standard AS 2890- Parking facilities, Parts 1-6".

The development was assessed against A1.1(b). The relevant Australian Standards associated with the development is AS2890.1. The assessment is provided in the following sections.

5.4.1 Driveway Grade

Section 2.5.3(b) of AS2890.1 states the following regarding the maximum grade of straight ramps:

i. Longer than 20 metres – 1 in 5 (20%) maximum.

ii. Up to 20 metres long – 1 in 4 (25%) maximum. The allowable 20 m maximum length shall include any parts of the grade change transitions at each end that exceed 1 in 5 (20%).

The maximum grade of the access is well below the maximum AS2890.1 requirements.

5.4.2 Parking Grade

Section 2.4.6 of AS2890.1 states that the maximum grades within a car park shall be:

- Measured parallel to the angle of parking 1 in 20 (5%)
- Measured in any other direction 1 in 16 (6.25%)

The grades of the parking spaces are effectively level, thus complying with the AS2890.1 grade requirements.

5.4.3 Parking Dimensions

AS2890.1 defines the parking as User Class 1A, *Residential, Domestic and Employee Parking*. Parking dimension requirements for 90-degree parking for User Class 1A are:

- Space length 5.4 metres
- Space width 2.4 metres
- Aisle width 5.8 metres

All parking spaces comply with AS2890.1 requirements.

5.4.4 Driveway Width

AS2890.1 defines the access as 'Category 1' access facility (Class 1A parking with 25 to 100 spaces fronting onto a local road). The AS2890.1 minimum driveway width requirement for a Category 1 access is 3.0 metres.

The available width complies with this requirement at the driveway, therefore the access width complies with the requirements of AS2890.1.

5.4.5 AS2890.1 Assessment Summary

The parking space dimensions and manoeuvring areas comply with the requirements of AS2890.1. The development therefore complies with the requirements of Acceptable Solution A1.1(b) of Clause C2.6.2 of the Planning Scheme.

6. Conclusions

This traffic impact assessment (TIA) investigated the traffic and parking impacts of a proposed residential unit development at Lot 2 Louisa Street, Kempton.

The key findings of the TIA are summarised as follows:

- The development includes 16 residential units. The traffic generation associated with the development is likely to be 96 vehicles per day, with a peak of 10 vehicles per hour.
- The development's access on Louisa Street satisfies the requirements of Performance Criteria P1 of Clause C3.5.1 of the Planning Scheme.
- The development provides pedestrian paths along the driveway connecting to Louisa Street, as well as within the internal accesses. The development meets the pedestrian requirements of Performance Criteria P1 of Clause C2.6.5 of the Planning Scheme.
- A total of 31 on-site parking spaces are proposed. The parking demands satisfies the requirements of Performance Criteria P1 of Clause C2.5.1 of the Planning Scheme.

Based on the findings of this report the proposed development is supported on traffic grounds.

Figures

Table

1 Context

1.1 General

A new unit development is proposed at Lot 2 Louisa Street, in Kempton, Tasmania. The proposed development site is shown in Figure 1 below.

To the southwest of the site, the Green Ponds Rivulet passes within 50 m of the site, while at the intersection of Elizabeth and Louisa Street a DN900 stormwater pipe discharges uphill catchment runoff to a open drain along the southern boundary of the site.

In a request for further information (dated 14 March 2024) Council has requested a Flood Hazard and Stormwater Management Report for the proposed development.

Figure 1. Site location.

2 Site Description

2.1 Site Overview

The Green Ponds Rivulet is a tributary to the Jordan River, which flows from the Midlands, in central Tasmania, into the Derwent Estuary at Herdsmans Cove, south of Bridgewater. The Green Ponds Rivulet generally flows from South to North. The upper catchments encompass the slopes of Big Hill and Constitution Hill, south of the town of Kempton, and a number of tributary creeks join Green Ponds Rivulet prior to its confluence with the Jordan River, including Glenfern Creek, as well as several smaller, unnamed tributaries. The Jordan River catchment is the driest in Tasmania[1] as it falls in the rain shadow of the highlands, and is sheltered from prevailing rain-bearing winds.

[1] *Jordan River Flood Data Book* (DPIWE, 2000)

Lot 2 Louisa Street is located toward the centre of the town of Kempton, and is separated from Green Ponds Rivulet by only one property (12 Elizabeth Street). On the southern boundary of the proposed development site, an open channel drain conveys stormwater runoff from an uphill catchment, as well as municipal runoff, towards the rivulet.

The stormwater catchments reporting to the proposed development site are shown below in Figure 2, and constitute a 14.5 ha catchment, which is piped to the open channel along the southern property, as well as a 1,310 ha catchment, which comprises the Green Ponds Rivulet.

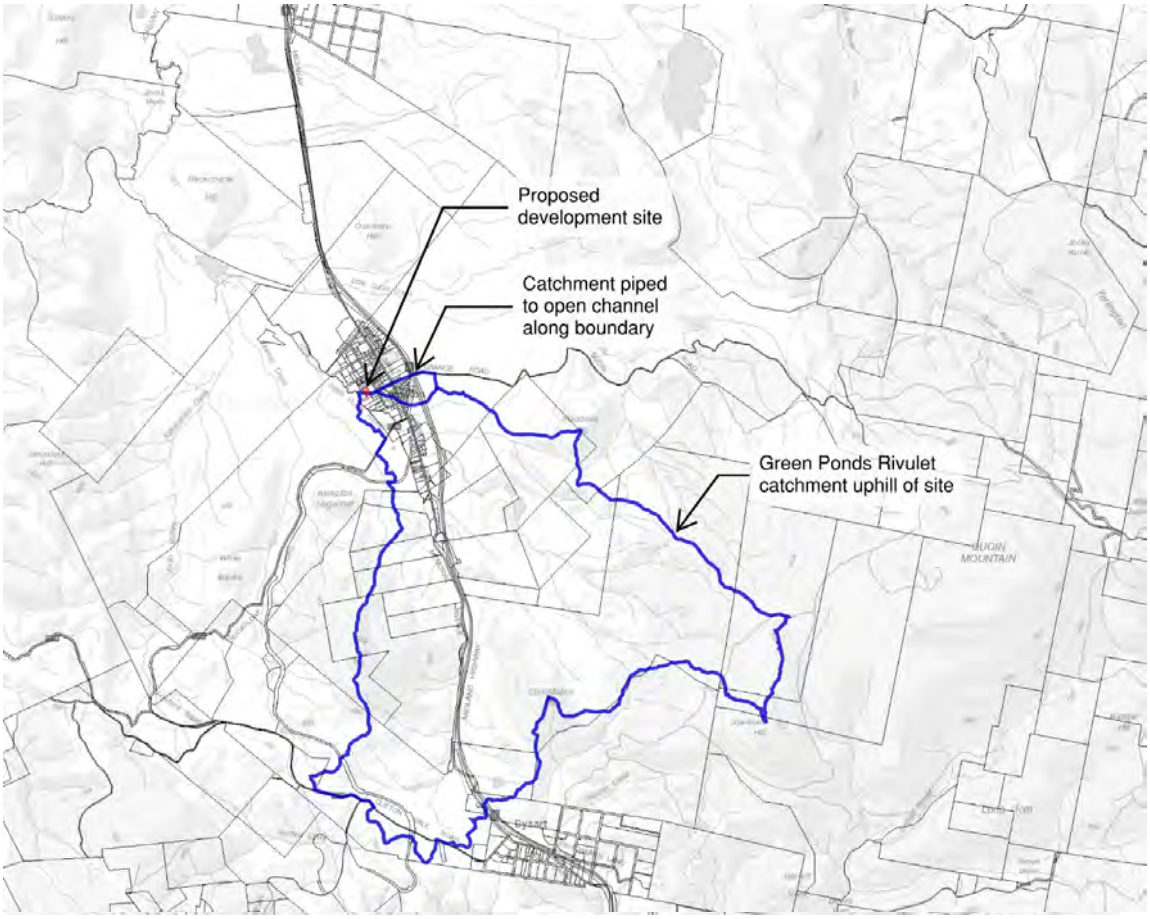

Figure 2: Stormwater catchments reporting to site

Downstream, and to the north of the site of interest, the Green Ponds Rivulet enters a series of dams and constructed basins within the property of 141 Wilderness Lane, Kempton, before joining the Jordan River, some 3.5 km downstream of the proposed development site.

3 Hydrological Analysis

In order to simulate the rain runoff generated by the uphill catchments, a stand-alone hydrological analysis was undertaken in XP Storm to determine stormwater flow generated under a range of storm events.

3.1 Methodology

A hydrological analysis of the stormwater catchments was undertaken in XP Storm 2019 using the methods recommended by Australian Rainfall and Runoff (ARR) 2019.

3.1.1 Rainfall Data and Storm Events

Rainfall data was obtained from the ARR Data Hub, at Latitude -42.539; Longitude 147.208 for the 1% Annual Exceedance Probability (AEP) event.

3.1.2 Climate Change Loading

The 2090 RCP8.5 climate change factor of 16.3% was adopted for future climate change loading, as recommended by ARR.

3.1.3 Catchment Delineation

Catchment delineation of the Green Ponds Rivulet basin uphill of the development site was undertaken using QGIS. A large catchment of 1,310 ha was delineated, extending some 5 km in length with an elevation change of 540 m. The catchment piped to the open channel adjacent to the site was delineated to be 14.5 ha, extending 650 m with an elevation gain of 35 m.

3.1.4 Catchment Topography

The catchment topography was derived from a 1 m DEM, developed from LiDAR captured as part of the Kempton (2010) and South East (2011) LiDAR datasets. A slope analysis of the catchment was undertaken, with representative slopes between 2.5 - 10% adopted for the hydrological assessment. It is recognised that the catchment includes steeper slopes towards the upper reaches of the catchment, however, these were aggregated into the upper limit of 10% due to their distance from the area of interest.

3.1.5 Hydrological Parameters

The Laurenson method was utilised as the routing method. Parameters provided by the ARR Data Hub are provided in Table 1 below, along with the parameters adopted (shown in bold).

Table 1: Hydrological Parameters Adopted

Rainfall Event (AEP)	ARR Storm Initial Loss (mm)	Adopted Preburst Depth (mm)	'Burst' Initial Loss (mm)	ARR Continuing Loss (mm/h)	Adopted Continuing Loss (mm/h)	Manning 'n' pervious	Non-linearity factor
1% + CC	24.0	13.9	6.5	4.7	4.7	0.04	-0.285

Initial and continuing losses were derived from values published on the ARR data hub. It is recognised that the values published are for complete storms for pervious areas. A 'pre-burst' rainfall depth was subtracted from the published initial loss value to correlate the initial loss with expected catchment behaviour in accordance with ARR recommendations[2].

The continuing loss was adopted for this assessment with no adjustments from the published value.

3.1.6 Aerial reduction factors

Aerial reduction factors were applied in accordance with ARR Book 2, Chapter 4.3 for the Green Ponds Rivulet catchment. No reduction factors were applied for the smaller urban catchment.

[2] ARR Book 5 Ch 3.3.2

3.2.7 Modelled Catchment Runoff Results

Catchment hydrographs are presented below for a range of storm durations for the 1% AEP rainfall event, inclusive of climate change effects.

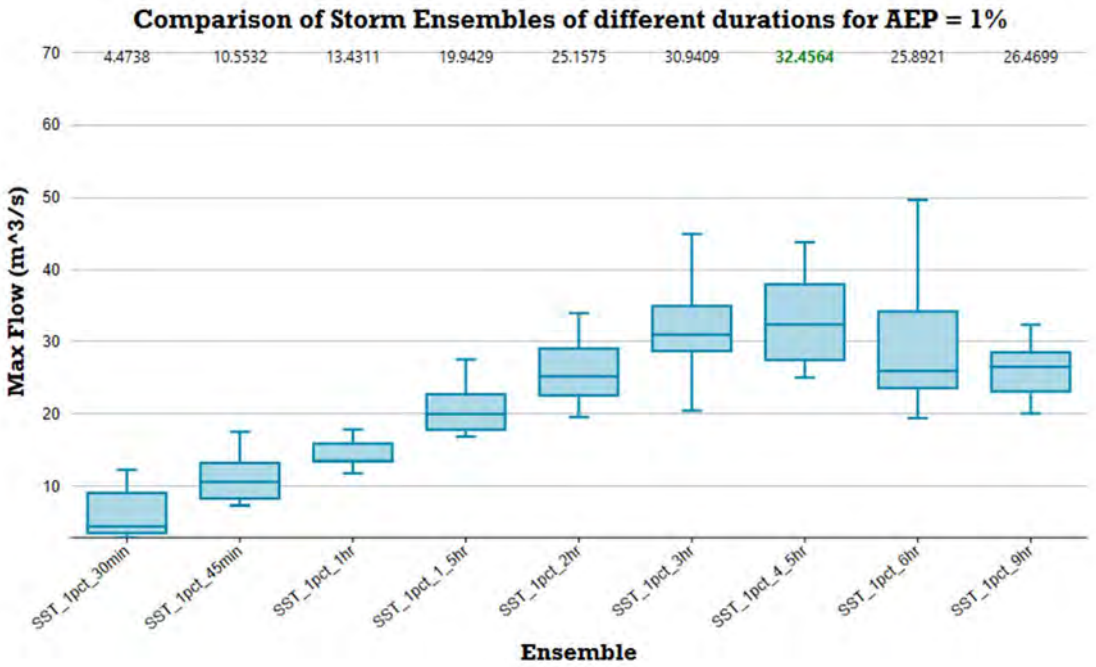

Figure 3: Ensemble runoff results for the Green Ponds Rivulet Catchment at the site of interest. The critical duration is identified as the 4.5 hour event.

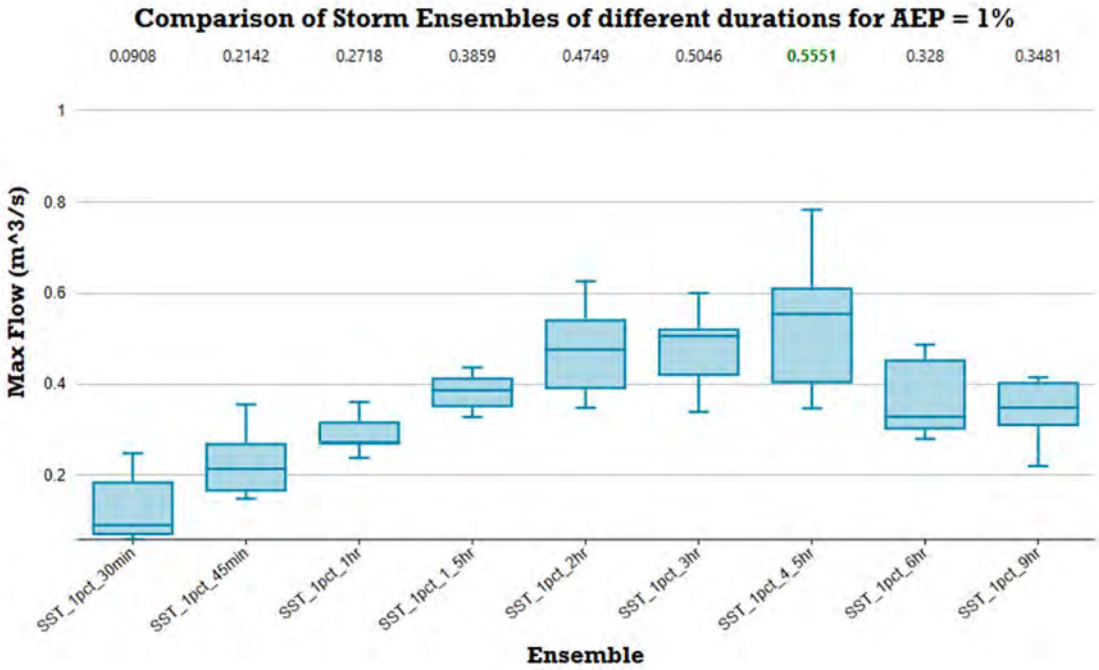

Figure 4: Ensemble runoff results for the municipal catchment piped to the site of interest. The critical duration is identified as the 4.5 hour event.

3.2 Regional Flood Frequency Estimation Model

Regional Flood Frequency Estimation (RFFE) was undertaken using the ARR online software to provide a comparison to the peak flow rates derived from the hydrological modelling. An estimation was undertaken for a catchment of 13.1 km^2 with extents reflecting the Green ponds Rivulet catchment.

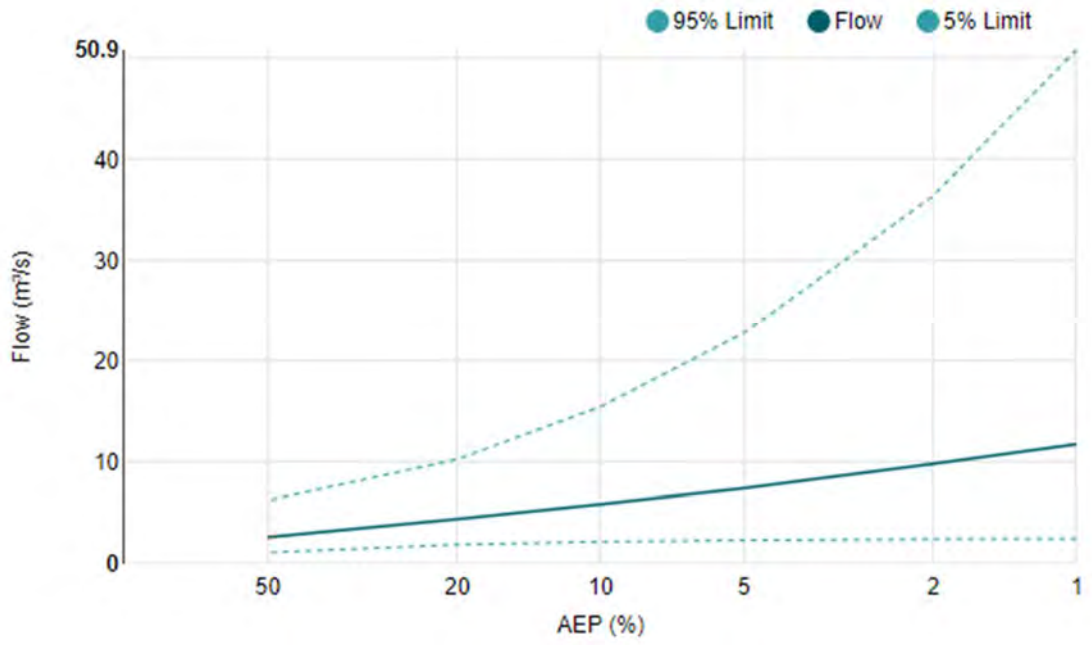

Figure 5: ARR RFFE catchment runoff estimation.

Table 2: ARR RFFE catchment runoff model results

AEP (%)	Discharge (m^3/s)	Lower Confidence Limit (5%) (m^3/s)	Upper Confidence Limit (95%) (m^3/s)
50	2.65	1.14	6.27
20	4.44	1.91	10.3
10	5.88	2.20	15.5
5	7.46	2.34	22.8
2	9.83	2.46	36.5
1	11.8	2.48	50.9

3.3 Comparison Against Gauged Data

Historical flood data for the Jordan River is published in the *Hydrological Analysis of the Jordan River Catchment* (DPIWE, 2003). Within this report, flood peak information is provided based on a stream gauge at Mauriceton, directly downstream of the confluence of the Green Ponds Rivulet with the Jordan River. This gauged data is presented below in Figure 6. While not directly related to the peak flows within the Green Ponds Rivulet, this data provides a gauged comparison for the hydrological analysis presented in this report. The Green Ponds Rivulet is estimated to be less than 10% of the Jordan River catchment at Mauriceton. The 1% AEP peak rivulet flow rate adopted for this analysis, however, accounts for approximately 32% of the predicted 1% AEP flow rate for the Jordan River at Mauriceton, indicating that the hydrological analysis is likely conservative. This aligns with the results of the RFFE, whereby the predicted 1% AEP flow rate exceeds the RFFE predicted flow, but falls within the 95% confidence limit.

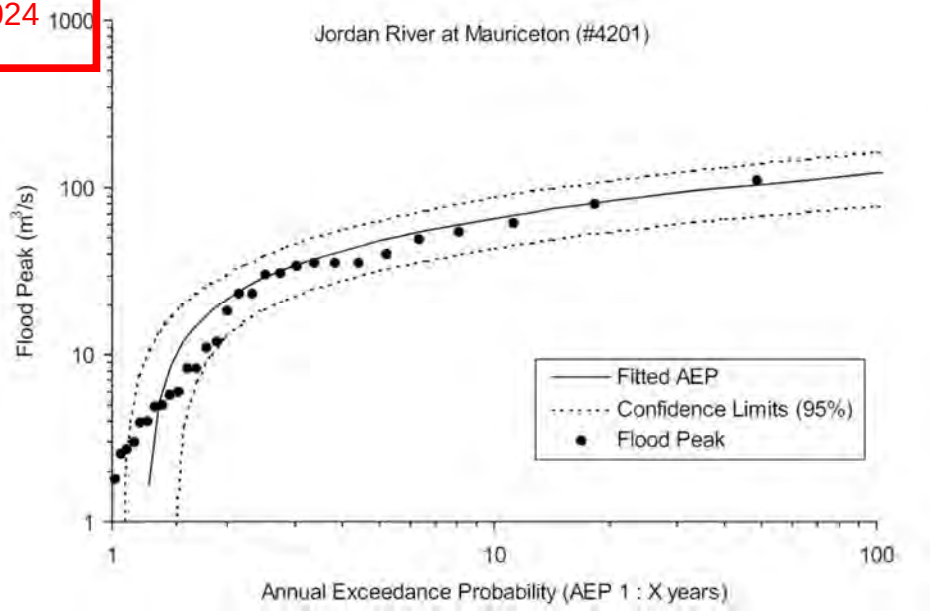

Figure 6: Flood frequency curves for Jordan River gauging site (from *Hydrological Analysis of the Jordan River Catchment*, 2003).

4 Hydraulic Modelling

4.1 Model Configuration

A stand-alone 2D hydraulic model was undertaken using TUFLOW analysis in 12d Model (Version 15).

4.1.1 2D Inflow Methodology

The Green Ponds Rivulet hydrograph developed from the hydrological analysis was applied to the 2D model directly downstream of the Sugarloaf Road culvert. Due to the distance of the culvert from the site of interest, no consideration was given to the capacity of the culvert, and any local flood impacts the culvert may cause under a 1% AEP rainfall event would be anticipated to dissipate prior to the site of interest.

The urban catchment input hydrograph was applied at the pipe outfall to the open channel, at the southeastern corner of the site.

4.1.2 1D Links

Due to the assessment primarily focussing on riverine inundation, no 1D links were modelled in the hydraulic analysis. Existing culverts under the driveway to 12 Elizabeth Street were modelled as an open channel profile, as these pipes are sufficiently far downstream to not affect the proposed development site.

4.1.3 2D Surface Model

2D surface model TINs were developed based on 1 m LiDAR DEM, site survey, and site design. These DEMs were combined to generate a representative 2D surface model of the site, both pre-development, and post-development of the proposed units and driveways.

Within 12d Model, a 1.5 m^2 grid cell was used to simulate 2D surface flow with subgrid sampling frequency of 5. Adopted Manning's values are shown below for the 2D model.

Table 3: 2D Manning's Roughness Values

Land Use Type	Manning's 'n'
Green Ponds Rivulet and riparian zone	0.04
Grassed/urban areas	0.03

4.1.4 Boundary Conditions

An outfall boundary condition was modelled some 300 m downstream of the study site to ensure boundary conditions did not impact results in the area of interest. A 0.4 m boundary channel depth was modelled, with an energy slope of 2%.

4.2 Model Scenarios

2D Hydraulic models were developed for the following scenarios:

1. 1% AEP + CC Inundation Model – pre-development
2. 1% AEP + CC Inundation Model – post-development

5 Inundation Results

Inundation Depth and Depth Afflux maps are presented in Appendix A for 1% + CC inundation.

5.1 Inundation Analysis

As shown in Appendix A, the inundation within the local area of interest is largely due to riverine inundation from the Green Ponds Rivulet. Under a 1% rainfall scenario, the narrow banks of the rivulet do not contain uphill runoff, and inundation of the riparian zone is predicted with depths typically within the range of 300 – 600 mm. From consultation with the local community, and discussion with the property owner of 12 Elizabeth Street, these results reflect flooding previously witnessed within the area under extreme rainfall events.

On the southern boundary of the proposed development site, the open channel drain is typically predicted to contain all uphill runoff, however, under a 1% AEP rainfall event some breakout of the channel is predicted, with very shallow sheet flow (10 – 20 mm depth) predicted passing through St Peters Catholic Cemetery. In accordance with the 'general' flood hazard curves recommended in ARR 2019 (refer Appendix B) the pre-development inundation hazard within the proposed development site may be classified as 'H1 – generally safe for people, vehicles and buildings'.

As part of the proposed development, the access driveway and internal layout are designed to accommodate overland flow through the site. As shown in Appendix A, post-development inundation is shown to pass safely through the proposed development, and is generally contained to the access driveway. Under the post-development scenario, 20 – 50 mm inundation depth is predicted against the access driveway kerb, with typically no impact on the proposed units. In the southern corner of the site, inundation is predicted in close proximity to one dwelling (unit 4). This unit can be appropriately protected against inundation by setting the finished floor level (FFL) 300 mm above the adjacent inundation levels. Under the 1% AEP + CC rainfall event, the predicted maximum inundation level adjacent to the unit is RL 204.16, hence setting the unit FFL to RL 204.5 will provide appropriate protection against potential inundation.

The predicted change between inundation depths pre-development and post-development is illustrated by depth afflux mapping, and is presented in Appendix A. This mapping reveals a re-direction of the overland flow path through the proposed development site, with very little change in depth for areas already at risk of inundation. Within the property directly downhill from the proposed development site (12 Elizabeth Street) a very minor redistribution of overland flow is predicted within proximity of the driveway. No net increase in flood depth is predicted within the property, and no change in inundation hazard is predicted to the existing dwelling or outbuildings on the site.

The proposed development site is considered generally safe for people, vehicles and buildings under a 1% AEP inundation event. The proposed site design mitigates any potential inundation risk within the site, and causes no discernible impact to neighbouring properties.

6 Consideration for On-Site Detention

On-site stormwater detention is a water sensitive urban design practice, whereby the peak site discharge from new impervious areas is reduced by discharging the total rainfall runoff over a longer period of time than the critical storm event for the site.

As described in Section 3, the critical storm duration that would result in maximum flow within the Green Ponds Rivulet for a 1% AEP rainfall event was calculated to be a 4.5-hour rainfall event, and for a 5% AEP rainfall event the critical duration is predicted to be 3-hours. For the proposed unit development, however, the critical storm duration that would result in the highest peak flow rate is predicted to be a 10-minute rainfall event.

Given the critical duration for the unit development is much shorter than the critical storm duration for the Green Ponds Rivulet, it is considered preferrable not to provide on-site detention for this development. Providing on site detention would delay the peak site discharge from the new development, and could cause the peak flow rate from the proposed development to more closely coincide with the peak flow in the rivulet, exacerbating peak flows downstream. An example of this is illustrated in Figure 7 below, whereby the undetained peak outflow is shown to pass prior to the peak flow within the rivulet, whereas the detained site outflow is more closely coincident with the flow within the rivulet. As such, no on-site detention is proposed.

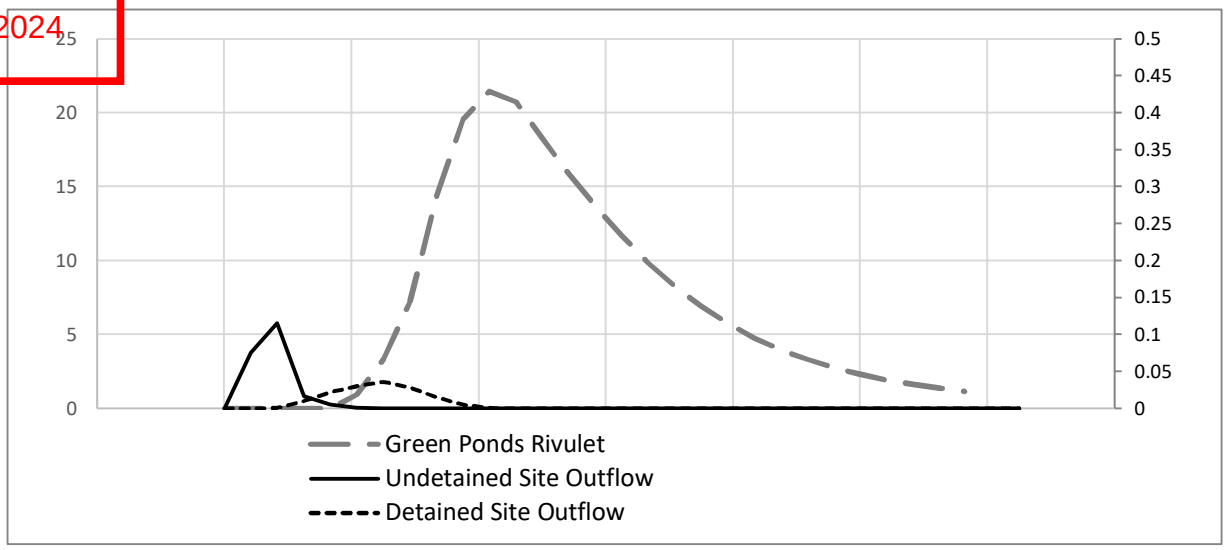

Figure 7: Comparison of detained and undetained site outflow vs flow within Green Ponds Rivulet for an example 5% AEP rainfall event. Flow rates in m^3/s. Site outflows on secondary axis.

7 Stormwater Treatment

In accordance with the *Tasmanian Stormwater Policy Guidance and Standards for Development* (2021), as well as the Tasmanian *State Stormwater Strategy* (2010), Stormwater should be managed and treated at source using best management design practices to achieve the following stormwater management targets:

- 80 per cent reduction in the annual average load of total suspended solids
- 45 per cent reduction in the annual average load of total phosphorus
- 45 per cent reduction in the annual average load of total nitrogen

The new unit development proposes to incorporate 9 x OceanProtect PSORB Stormfilters within an underground vault, treating all hardstand runoff, and the majority of garden areas (with 525 m^2 untreated).

MUSIC V6.2.1 was used to model the performance of the concept stormwater system for the proposed development. The model predicted the following performance outcomes:

- Total Suspended Solids reduction of 81%
- Total Phosphorus reduction of 73.8%
- Total Nitrogen reduction of 48.8%

These reduction percentages meet Council requirements for stormwater treatment.

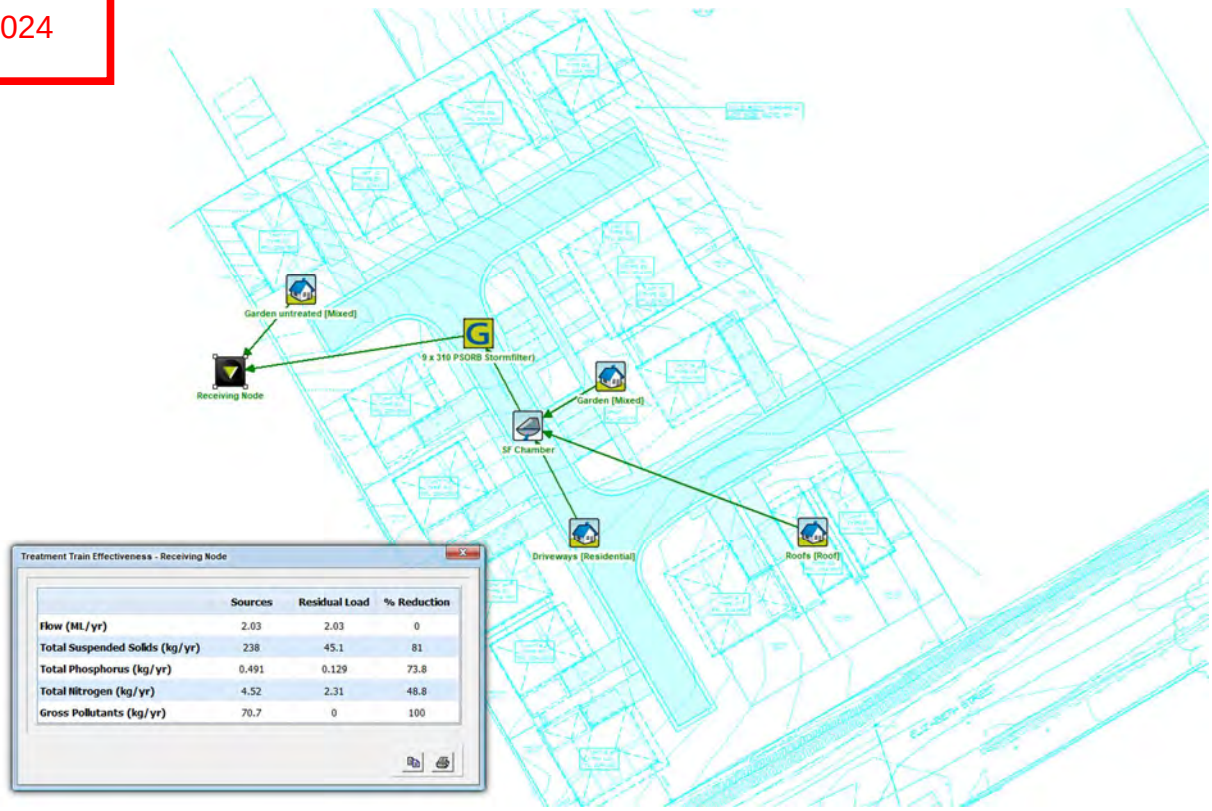

Figure 8: MUSIC analysis stormwater treatment schematic and results.
